ZETAfax[®] for Networks

Point. Click. Fax.

Enterprise Edition

The most scalable and comprehensive network fax solution suitable for any enterprise requiring 100 or more users.

Benefits

Enterprise-wide network faxing: includes support for unlimited servers and an unlimited number of lines

Suitable for single and multiple site enterprise deployment

Easy server configuration and centralized multi-client installation

Includes SMS Gateway, API Toolkit, Software Assurance and Document Conversion for converting over 220 file types to fax format

The Zetafax Enterprise Edition is ideal for large organizations requiring a reliable, scalable and versatile network fax solution. With unlimited servers and lines, it enables high volume faxing across multiple locations for any size of business.

Fast and easy installation and configuration

The Zetafax Server is installed using MSI install and an installation and configuration wizard. Zetafax supports Group Policy, so Zetafax Clients can be deployed quickly to multiple desktops using a single, central install.

A choice of intuitive faxing interfaces for users

Zetafax users can fax from Microsoft Outlook, Lotus Notes or SMTP email clients, the Web Client and Microsoft Office documents. The included SMS Gateway provides desktop text messaging.

Integrated faxing with the software of your choice

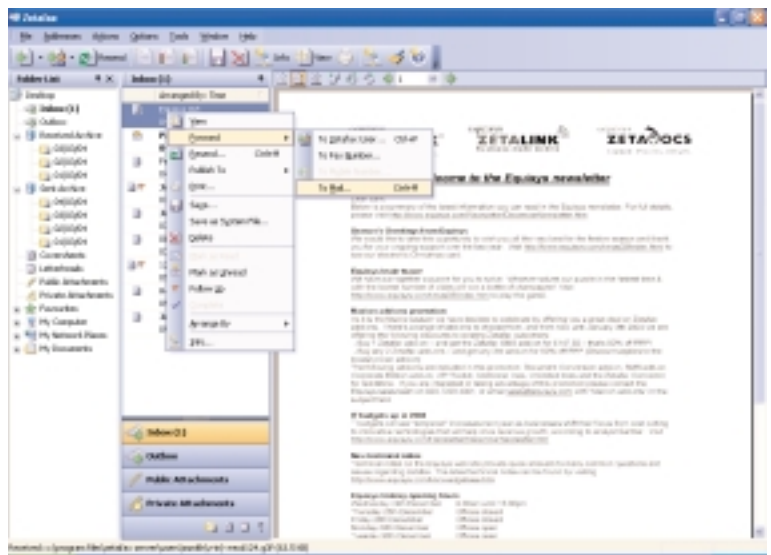

The included API Toolkit enables faxing from other software applications.

Rich administration and management features

The Zetafax reporting tool lets you keep full fax log records, allocate charge codes and create audit trails. Fax usage can be billed to specific departments or external clients.

Least Cost Routing (LCR) enables faxing between servers on a WAN at minimal cost. Zetafax also supports Windows child domains and Exchange cluster environments.

Fax servers can be managed from a single location using remote monitoring, queue management and the MMC configuration module. The Zetafax Client can be installed on an application server so network users in branch offices can be fax-enabled via existing thin client sessions over a WAN.

Equisys is one of the world's leading fax technology innovators.

User feature highlights:

- Intuitive Microsoft Outlook 2003-style fax client with address book, system tray alert, preview pane and customizable shortcuts
- Ability to fax direct from Microsoft Office documents, Email Client, Web Client and any application enabled with the API Toolkit
- SMS text messaging from the desktop
- PDF document conversion, for forwarding of inbound faxes to any PC user
- Broadcast fax capability with advanced embedded addressing for easy management and personalization
- Multi-doc feature for combining multiple documents such as letters and spreadsheets into a single fax
- Automatic redial if busy and auto-printing of failed faxes
- Choice of addressing options from the integrated Microsoft Outlook address book and Zetafax private and public address books.

Administrator feature highlights

- Support for Exchange 2003, Office 2003 and Lotus Domino 6.5
- Choice of manual or automated routing of inbound faxes to individual PCs and network printers
- Support for Group Policy, allowing centralized installation of multiple clients
- Fax queue management for aborting or rushing of faxes
- Support for a range of fax hardware including V.34 modems, intelligent fax boards and ISDN controllers
- Supports clustered Microsoft Exchange server environments, Windows child domains and Least Cost Routing
- Allows automatic user account creation
- Reporting module provides full fax log records, charge codes, audit trails and archiving features
- Active Directory integration: the Zetafax Client checks Active Directory for the server's location, so no client reconfiguration is needed at the desktop.

Next steps

For further information, call Equisys or speak to your reseller. For other Zetafax for Networks systems see the Business and Corporate Edition datasheets.

Alternatively visit the Equisys website to find out more.
